

AMERISTAND 716NT RR BRAND

FALL DORMANCY: 7.3

Nematode Resistant Traffic Tested® Alfalfa with Roundup Ready® Technology

- · Exceptional salt tolerance
- Superior resistance to stem nematodes
- Excellent forage quality and yield potential
- High resistance to Pea aphid, Phytophthora root rot and other common yield robbing pests and diseases
- Improved salt tolerance of germinating seeds
- Parentage selected and screened for SN from elite semi-dormant lines
- Moderate multifoliate leaf expression improving forage quality
- The Roundup Ready® Alfalfa trait provides optimal weed control, making crop management easier than ever before. It helps produce better feed quality and stand during establishment while increasing yield potential.

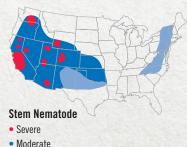

Aphids feed by sucking nutrients out of alfalfa plants. Heavily infested plants wilt during the hottest part of the day. Aphids also may transmit viruses which cause mottling, yellowing, or curling of leaves and stunting of plant growth.

Stem Nematodes Stem Nematodes are the most serious. nematode for alfalfa. A stem nematode infection destroys chloroplasts causing "white flags," or pale leaf tissue. When established, stem nematodes can severely limit productivity for two to three years.
