

MicroCote®

Patented Forage Seed Coating

**Gives Your Forage Seed an
Advantage Before and after Seeding**

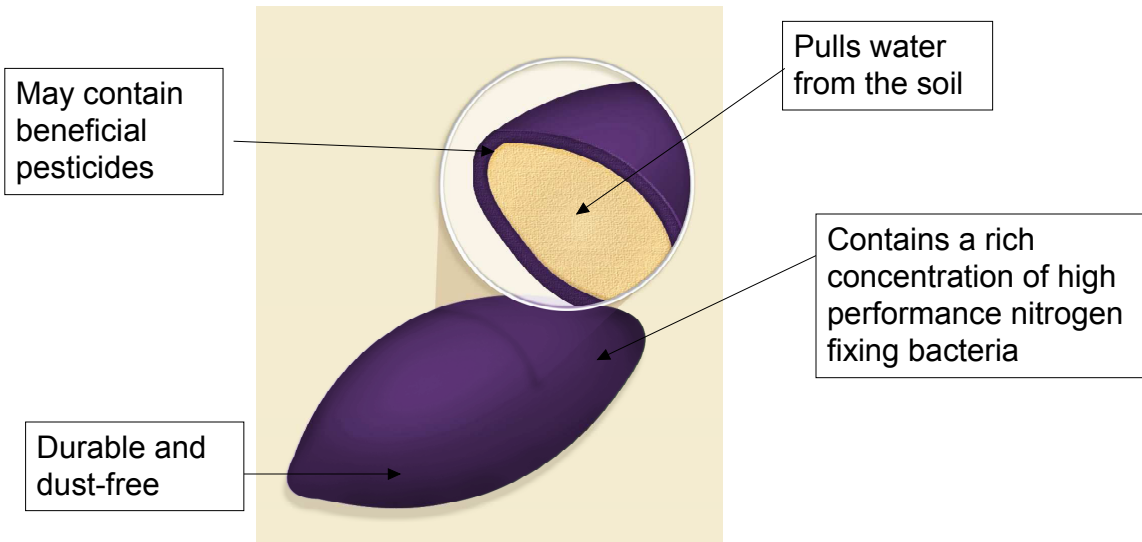

MicroCote® Yield Boosting Seed Coating For Forage Legumes

- Contains high performance nitrogen-fixing bacteria
- Contains a rich concentration of nutrients
- When Apron is included, provides a protected germination zone, resulting in vigorous growth in young seedlings
- Durable and nearly dust free coating

MicroCote® Benefits

seedbiotics
A BECKER UNDERWOOD COMPANY

MicroCote®

Assure fast, strong stand establishment, even under adverse conditions.

- **MicroCote** forage seed coating encapsulates each seed in a carefully formulated mix of minerals, special treatments and selected nutrients.
- **MicroCote** contains concentrated numbers of highly effective rhizobia bound to the seed's surface and that's carried into the soil along with other elements in the coating.
- **MicroCote** provides a protected germination zone and an ideal micro-environment for stimulating vigorous growth in young seedlings. The result? Every **MicroCote** coated seed gets every chance to realize its full genetic potential.

MicroCote®

- Is formulated to provide an overall growth-building advantage.
- Adds weight to seed for easier handling, resulting in more even distribution.
- Increased seed visibility – easier to monitor seeding rates.
- “Disguises” seed, discouraging avian predation.

MicroCote®

- Promotes healthier plants to create more top growth and tillering of plants – faster spreading and earlier coverage of bare areas.
- Increases seed and seedling survival rates.
- Improves root development.
- Increases likelihood of stand establishment under adverse conditions.
- Available fungicide component Apron XL® protects seedlings from most damping-off diseases.
