

AmeriStand 201T

FALL DORMANCY: 2

WINTERHARDINESS: 1.5

CUTTINGS/SEASON: 2-3

PERFORMANCE PROFILE

Traffic Tested®: Excellent

Yield Potential: Excellent

Forage Quality: Excellent

Stand Persistence: Excellent

Recovery After Cutting: Good

RESISTANCE RATINGS

Phytophthora Root Rot: HR

Aphanomyces Root Rot
RACE 1: HR

Anthracnose: R

Verticillium Wilt: HR

Bacterial Wilt: HR

Fusarium Wilt: HR

Pea Aphid: R

HR = >51% Resistance
R = 31-50% Resistance
MR = 15-30% Resistance
LR = 6-14% Resistance

The Diehard of Alfalfas

- More winterhardy than Vernal
- Excellent yield and quality potential
- High resistance to five diseases plus additional crown rot resistance
- Withstands abusive growing conditions and grazing
- Broad deep-set crowns and healthy root systems

SELECTED FOR SURVIVAL AND PERSISTENCE

Under severe selection pressure for *Phytophthora* root rot and winter injury, the surviving parent plants had the best root and crown health. The exposure to traffic for three years helped create large and deeper crowns, high root and crown carbohydrate reserves for re-growth and winter survival. The increased resistance to the crown rot complex including *Phoma* crown rot increases potential for higher yields and stand establishment. Young seedlings are vigorous and resistant to root rots in the critical first two weeks after planting.

Traffic Tested® varieties are bred and selected for improved plant types with:

- Large deep-seated crowns
- Fine stems
- Abundant leaf mass
- Heavy plant weight
- Large roots to store energy
