Nematode Resistant Traffic Tested® Roundup Ready® Tolerant Alfalfa

- High quality and yield potential while complimenting conventional Archer III in adapted regions
- Excellent choice to maximize forage production while profiting from the Roundup Ready® weed control system
- High resistance to multiple yield-robbing pests including root knot nematode and stem nematode

TRAFFIC TESTED® GENETICS WITH HIGH NEMATODE RESISTANCE

Root Knot Nematodes like stem nematodes, may enhance diseases such as bacterial wilt, *Phytophthora* Root Rot, and *Fusarium* Wilt. Symptoms of infection are small distinct galls on roots.

Stem Nematodes are the most serious nematode for alfalfa. A stem nematode infection destroys chloroplasts causing "white flags," or pale leaf tissue. When established, stem nematodes can severely limit productivity for two to three years.
