

AmeriStand 901TS

FALL DORMANCY: 9

CUTTINGS/SEASON: 8+

PERFORMANCE PROFILE

Traffic Tested®: Excellent

Yield Potential: Excellent

Stand Persistence: Excellent

Recovery After Cutting: Fast

Salt Tolerance*: Germination

RESISTANCE RATINGS

Phytophthora Root Rot: HR

Anthracnose: R

Verticillium Wilt: MR

Bacterial Wilt: R

Fusarium Wilt: HR

Stem Nematode: R

Root Rot Nematode: HR

Pea Aphid: HR

Blue Alfalfa Aphid: R

HR = >51% Resistance
R = 31-50% Resistance
MR = 15-30% Resistance
LR = 6-14% Resistance

*In tests established by the NAAIC Review Board, this variety demonstrated improved salt tolerance of germinating seeds as compared to the industry salt tolerant checks. References available upon request.

Top Quality, Yield and Persistence

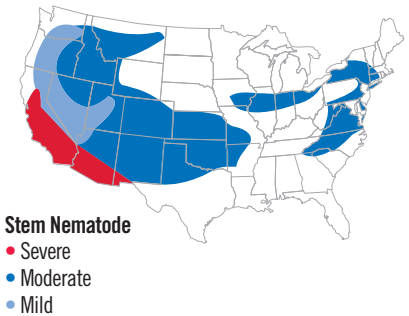

- Excellent persistence and fast recovery for aggressive cutting cycles
- Proven yield potential in the Southwest US
- High resistance to *Phytophthora* root rot, *Fusarium* wilt, pea aphid and root knot nematode
- Top quality with excellent color and vigor
- Improved salt tolerance of germinating seeds*

NEMATODES AND SALT ARE YIELD ROBBERS

Nematodes are often an unrecognized cause of severe yield and stand loss. Alfalfa varieties with resistance can protect from the most troublesome nematodes including Northern and Southern Root Knot Nematode and Stem Nematode. Nematode resistance also reduces susceptibility to other diseases, such as *Fusarium* and Bacterial Wilt.

Soil salinity currently limits crop production potential in parts of the western United States, especially alfalfa under irrigation. Salinity reduces yield and accelerates stand decline. To produce high quality hay in saline environments, planting a variety proven to tolerate salt is a key best management practice. Also note that proper soil amendments, proper irrigation, etc. are also needed to maximize yield.

VARIETY PERFORMANCE

YIELD TRIAL LOCATION	TRIAL YEARS REPORTED	MULTI-YEAR TOTAL TONS PER ACRE	MULTI-YEAR % OF MEAN
Shafter, CA	5	50.55	117%
Holtsville, CA	5	36.96	104%
Dos Palos, CA	3	14.07	105%
Five Points, CA	3	38.47	105%
Imperial Valley, CA	3	38.63	106%

The above table compares variety performance in locations with positive results relative to trial means.
