

AMERISTAND 901TS

FALL DORMANCY: 9

Top Quality, Yield and Persistence

- Excellent persistence and fast recovery for aggressive cutting cycles
- Proven yield potential in the Southwest US
- High resistance to Phytophthora root rot, Fusarium wilt, pea aphid and root knot nematode
- Top quality with excellent color and vigor
- Improved salt tolerance of germinating seeds*

• Primary Adaptation

Nematodes and Salt are Yield Robbers

Nematodes are often an unrecognized cause of severe yield and stand loss. Alfalfa varieties with resistance can protect from the most troublesome nematodes including Northern and Southern Root Knot Nematode and Stem Nematode. Nematode resistance also reduces susceptibility to other diseases, such as Fusarium and Bacterial Wilt.

Soil salinity is a limiting factor for crop production in parts of the western United States. Salinity reduces yield and accelerates stand decline. To produce high quality hay in saline environments, planting a variety proven to tolerate salt is a key best management practice. Note that proper soil amendments and proper irrigation are also needed to maximize yield.

Root Knot Nematode

- Severe
- Moderate
- Mild

Product Performance: West

| PRODUCT | MULTI-YEAR % OF CHECKS |
|------------------|------------------------|
| AMERISTAND 901TS | 119 |
